Control & Manage Your Park Site Services

- PARKVEND is a simple to use pitch management system that allows park operators to control and manage electric and water services anywhere, anytime on any device. Guests/residents are provided with a seamless services provision via their smartphone/tablet.
- PARKVEND NETWORK uses a wireless LoRaWAN (Long Range Wide Area Network) connection to link services to the management system as opposed to a wired solution, saving time, costs, and labour.
- Designed for Internet of Things, the technology provides greater range than Wi-Fi or Bluetooth, thus enabling applications in remote areas where a wired solution is not desirable or feasible.
- Ideal for busy park environments where service activation must be instant and dependable.
- PARKVEND NETWORK devices allow retrofit of currently installed non-metered services.

- 📍 Interactive dashboard
- ⚡ Implement own tariffs
- ⚙️ Management of user accounts
- 🔄 Billing & payment chasing facilities
- 🔌 Electrical socket auto disconnect

A TYPICAL PARKVEND NETWORK WIRELESS INSTALLATION EXAMPLE
